

Common Implementation Deficiencies of EHCP at School Level

Common Implementation Deficiencies

No handwashing facility

Common Implementation Deficiencies

The facility is not fixed and durable

Common Implementation Deficiencies

The facility is not child friendly

Common Implementation Deficiencies

The facility is not maintained

Common Implementation Deficiencies

The facility can only accommodate few children

Common Implementation Deficiencies

The facility is not functional

Common Implementation Deficiencies

The space is unventilated, dark, and narrow

Common Implementation Deficiencies

The facility is not ideally located

Common Implementation Deficiencies

The health corner is poorly maintained, and no soap available

Common Implementation Deficiencies

The comfort room is not clean

Common Implementation Deficiencies

The comfort room is not functional

Common Implementation Deficiencies

Toothbrush holder is not properly labelled

Common Implementation Deficiencies

Material used is not ideal and durable (cardboard)

Common Implementation Deficiencies

Material used is not durable (foil)

Common Implementation Deficiencies

Material used is not functional (chicken wire)

Common Implementation Deficiencies

Not ideal – too tightly spaced, no proper labelling

Common Implementation Deficiencies

Design is not practical

Common Implementation Deficiencies

Unused toothbrush (for display only)

Common Implementation Deficiencies

Not ideal – close containers retains moisture and may promote spread of bacteria from one toothbrush to another

Common Implementation Deficiencies

Disorganized and consumes a lot of space

Common Implementation Deficiencies

Toothbrushes are not accessible to children and prone to accidents

Common Implementation Deficiencies

No cover – toothbrush bristles should not come in contact with another; spreads bacteria

Common Implementation Deficiencies

Two locks/stoppers are removed

Common Implementation Deficiencies

Rinsing after toothbrushing
